And if you didn't receive it, you can notify us through live chat or email, we will settle it for you, This is the most powerful evidence to prove how effective and useful our EXIN VERISMF exam study material is.

NEW QUESTION: 1An autonomous system has 7 routers configured with BGP. How many iBGP sessions are required for a fully meshed configuration?**A. 0B. 1C. 2D. 3Answer: C**

NEW QUESTION: 2You have a database named DB1.You must ensure that DB1 is highly available. You implement a Windows cluster. You need to create a Cluster Shared Volume (CSV) for the database and log files.Which three Windows Power Shell commands should you execute in sequence? To answer, move the appropriate Windows PowerShell commands from the list of Windows PowerShell commands to the answer area and arrange them in the correct order.

Answer: Explanation:ExplanationBox 1: \$cluster = Get-ClusterThe Get-Cluster cmdlet gets information about one or more failover clusters in a given domain.This cmdlet can obtain a variety of configuration and state information about a failover cluster, including the following items, such as the EnabledSharedVolumes property.Box 2: \$cluster.EnabledSharedVolumes = "Enabled"Box 3: Add-ClusterSharedVolume "Disk1"The Add-ClusterSharedVolume cmdlet makes a volume available in the Cluster Shared Volumes in a failover cluster. The Cluster Shared Volume must be chosen from the disks in Available Storage (that is, disks that have been added to the cluster but not assigned to a specific use in the cluster).References:
<https://docs.microsoft.com/en-us/powershell/module/failoverclusters/get-cluster>
<https://docs.microsoft.com/en-us/powershell/module/failoverclusters/add-clustersharedvolume?view=winserver2>

NEW QUESTION: 3Which option is a core event publisher for EEM?**A. Policy DirectorB. AppletC. TimerD. ScriptAnswer: C**Explanation:EEM is a flexible, policy-driven framework that supports in-box monitoring of different components of the system with the help of software agents known as event detectors. The figure below shows the relationship between the EEM server, core event publishers (event detectors), and the event subscribers (policies). Basically, event publishers screen events and publish them when there is a match on an event specification that is provided by the event subscriber. Event detectors notify the EEM server when an event of interest occurs. The EEM policies that are configured using the Cisco command-line interface (CLI) then implement recovery on the basis of the current state of the system and the actions specified in the policy for the given event.EEM offers the ability to monitor events and take informational or corrective action when the monitored events occur or when a threshold is reached. An EEM policy is an entity that defines an event and the actions to be taken when that event occurs. There are two types of EEM policies: an applet or a script. An applet is a simple form of policy that is defined within the CLI configuration. A script is a form of policy that is written in Tool Command Language (Tcl).Figure 1. Embedded Event Manager Core Event DetectorsReference:
