NEW QUESTION: 1 Wireless users report frequent disconnections from the wireless network. While troubleshooting a network engineer finds that after the user a disconnect, the connection re-establishes automatically without any input required. The engineer also notices these message logs .Which action reduces the user impact?**A.** enable coverage hole detection**B.** increase the dynamic channel assignment interval**C.** increase the AP heartbeat timeout**D.** increase BandSelect**Answer: B****Explanation:**These message logs inform that the radio channel has been reset (and the AP must be down briefly). With dynamic channel assignment (DCA), the radios can frequently switch from one channel to another but it also makes disruption. The default DCA interval is 10 minutes, which is matched with the time of the message logs. By increasing the DCA interval, we can reduce the number of times our users are disconnected for changing radio channels.

NEW QUESTION: 2 You have an Azure App Service plan that hosts an Azure App Service named App1. You configure one production slot and four staging slots for App1. You need to allocate 10 percent of the traffic to each staging slot and 60 percent of the traffic to the production slot. What should you add to App1?**A.** slots to the Testing in production blade**B.** a WebJob**C.** a performance test**D.** templates to the Automation script blade**Answer: A****Explanation:**Besides swapping, deployment slots offer another killer feature: testing in production. Just like the name suggests, using this, you can actually test in production. This means that you can route a specific percentage of user traffic to one or more of your deployment slots. Example: References: <https://stackify.com/azure-deployment-slots/>
