NEW QUESTION: 2 You design data engineering solutions for a company that has locations around the world. You plan to deploy a large set of data to Azure Cosmos DB. The data must be accessible from all company locations. You need to recommend a strategy for deploying the data that minimizes latency for data read operations and minimizes costs. What should you recommend? **A.** Use multiple Azure Cosmos DB accounts. For each account, configure the location to the closest Azure datacenter. **B.** Use a single Azure Cosmos DB account. Enable geo-redundancy. **C.** Use a single Azure Cosmos DB account. Configure data replication. **D.** Use multiple Azure Cosmos DB accounts. Enable multi-region writes. **E.** Use a single Azure Cosmos DB account. Enable multi-region writes. **Answer: E** Explanation: Explanation With Azure Cosmos DB, you can add or remove the regions associated with your account at any time. Multi-region accounts configured with multiple-write regions will be highly available for both writes and reads. Regional failovers are instantaneous and don't require any changes from the application. References: <https://docs.microsoft.com/en-us/azure/cosmos-db/high-availability>

NEW QUESTION: 3 DRAG DROP A company has a single-domain Active Directory Domain Services (AD DS) environment. Some servers and all domain controllers are deployed on the internal network. All servers in the perimeter network are joined to a workgroup. The company uses System Center 2012 R2 Operations Manager to monitor the server infrastructure on the internal network. The company plans to use Audit Collection Services (ACS) for one Internet Information Services (IIS) server that is in the perimeter network. You need to configure the

authentication type and ACS role for Operations Manager and the IIS server. How should you configure the servers? To answer, drag the appropriate authentication type and ACS role to the location or locations in the answer area. Each authentication type and ACS role may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. Select and Place: **Answer:** Explanation: Explanation/Reference: Note: * When the Audit Collection Service (ACS) Forwarder is located in a domain separate from the domain where the ACS Collector is located, and no two-way trust exists between the two domains, certificates must be used so that authentication can take place between the ACS Forwarder and the ACS Collector.
