Answer: C

NEW QUESTION: 2 You manage the Git repository for a large enterprise application. During the development of the application, you use a file named Config.json. You need to prevent Config.json from being committed to the source control whenever changes to the application are committed. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.
Answer: Explanation: Explanation
Step 1: Delete and recreate the repository.
Step 2: Add Config.json to the .gitignore file
Each line in the .gitignore excludes a file or set of files that match a pattern.
Example: # ignore a single file
Config.json
Step 3: Run the git add .gitignore command
At the initial commit we want basically move from Untracked to Staged, for staging we have to indicate which file we want to move or specify a pattern, as example:
