Moreover, we sincere suggest you to download a part of free trail to see if you are content with our Lpi 201-450 exam study material and know how to use it properly.

**NEW QUESTION: 1**A user is collecting 1000 records per second. The user wants to send the data to CloudWatch using a custom namespace. Which of the below mentioned options is recommended for this activity?**A.** Create one csv file of all the data and send a single file to CloudWatch**B.** Send all the data values to CloudWatch in a single command by separating them with a comma.CloudWatch will parse automatically**C.** Aggregate the data with statistics, such as Min, max, Average, Sum and Sample data and send the data to CloudWatch**D.** It is not possible to send all the data in one call. Thus, it should be sent one by one. CloudWatch will aggregate the data automatically**Answer: C****Explanation:**Explanation/Reference:Explanation: AWS CloudWatch supports the custom metrics. The user can always capture the custom data and upload the data to CloudWatch using CLI or APIs. The user can publish data to CloudWatch as single data points or as an aggregated set of data points called a statistic set using the command put-metric-data. It is recommended that when the user is having multiple data points per minute, he should aggregate the data so that it will minimize the number of calls to put-metric-data. In this case it will be single call to CloudWatch instead of 1000 calls if the data is aggregated.Reference:

<http://docs.aws.amazon.com/AmazonCloudWatch/latest/DeveloperGuide/publishingMetrics.html>

**NEW QUESTION: 2****A.** Option **C****B.** Option **A****C.** Option **E****D.** Option **B****E.** Option **D****Answer: E****Explanation:**ExplanationThe IP address 192.168.1.17 255.255.255.0 specifies that the address is part of the 192.168.1.0/24 subnet24 mask bits = 255.255.255.028 mask bits = 255.255.255.240 192.168.1.0/24 subnet has a host range of 192.168.1.1 to 192.168.1.254 (0 being network and 255 being broadcast)192.168.1.17/28 subnet has a host range of 192.168.1.17 to 192.168.1.30 (16 being network and 31 being broadcast)192.168.1.65/28 subnet has a host range of 192.168.1.65 - 192.168.1.78 (64 being network and 79 being broadcast) if fa0/0 was left as /24, you can see that the host range includes the host range of 192.168.1.64/28 which conflicts. Simply speaking, you can't overlap the subnets. By changing the subnet mask of fa0/0 to 255.255.255.240, these networks would no longer overlap.

**NEW QUESTION: 3**You committed a new security policy on an SRX Series device. Now, traffic appears to be incorrectly dropped. Which two tools would you use to explain why traffic is dropped?(Choose two.)**A.** Trace options**B.** Firewall filter counters**C.** Session table**D.** Security logs**Answer: A,D**
