**NEW QUESTION: 3** Which command displays syslog messages on the Cisco ASA console as they occur?  
**A.** Logging console <level>  
**B.** Logging monitor <level>  
**C.** Terminal monitor  
**D.** Console logging <level>  
**E.** Logging trap <level>  
**Answer: A**  
Explanation: Explanation/Reference:

**NEW QUESTION: 4** A user has created an application which will be hosted on EC2. The application makes calls to DynamoDB to fetch certain data. The application is using the DynamoDB SDK to connect with from the EC2 instance. Which of the below mentioned statements is true with respect to the best practice for security in this scenario?  
**A.** The user should create an IAM user with DynamoDB access and use its credentials within the application to connect with DynamoDB  
**B.** The user should create an IAM role, which has EC2 access so that it will allow deploying the application  
**C.** The user should create an IAM user with DynamoDB and EC2 access. Attach the user with the application so that it does not use the root account credentials  
**D.** The user should attach an IAM role with DynamoDB access to the EC2 instance  
**Answer: D**  
Explanation: With AWS IAM a user is creating an application which runs on an EC2 instance and makes requests to AWS, such as DynamoDB or S3 calls. Here it is recommended that the user should not create an IAM user and pass the user's credentials to the application or embed those credentials inside the application. Instead, the user should use roles for EC2 and give that role access to DynamoDB / S3. When the roles are attached to EC2, it will give temporary security credentials to the application hosted on that EC2, to connect with DynamoDB / S3.
