The pas rate is 98.95% for the C-TS4FI-2023 exam torrent, and you can pass the exam if you choose us.

NEW QUESTION: 1 Which of the following objects can you use to configure the cost integration from project system (PS) to SAP portfolio and project management (PPM)?
A. Profit center
B. Controlling Area
C. CO Version
D. Cost Element
E. Company code
Answer: B,C,D

NEW QUESTION: 2 DRAG DROP You need to use Azure Automation State Configuration to manage the ongoing consistency of virtual machine configurations. Which five actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.
Answer:
Explanation: Select and Place: Explanation/Reference: Explanation: Step 1: Assign the node configuration. You create a simple DSC configuration that ensures either the presence or absence of the Web-Server Windows Feature (IIS), depending on how you assign nodes. Step 2: Upload a configuration to Azure Automation State Configuration. You import the configuration into the Automation account. Step 3: Compiling a configuration into a node configuration. Compiling a configuration in Azure Automation Before you can apply a desired state to a node, a DSC configuration defining that state must be compiled into one or more node configurations (MOF document), and placed on the Automation DSC Pull Server. Step 4: Onboard the virtual machines to Azure State Configuration. Onboarding an Azure VM for management with Azure Automation State Configuration Step 5: Check the compliance status of the node. Viewing reports for managed nodes. Each time Azure Automation State Configuration performs a consistency check on a managed node, the node sends a status report back to the pull server. You can view these reports on the page for that node. On the blade for an individual report, you can see the following status information for the corresponding consistency check: The report status - whether the node is "Compliant", the configuration "Failed", or the node is "Not Compliant" (when the node is in Apply and Monitor mode and the machine is not in the desired state).

NEW QUESTION: 3 You have an Azure subscription named Sub1 that contains an Azure Storage account named Contosostorage1 and an Azure key vault named Contosokeyvault1. You plan to create an Azure Automation runbook that will rotate the keys of Contosostorage1 and store them in Contosokeyvault1. You need to implement prerequisites to ensure that you can implement the runbook. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.
Answer: Explanation: Explanation Step 1: Create an Azure Automation account Runbooks live within the Azure Automation account and can execute PowerShell scripts. Step 2:

Import PowerShell modules to the Azure Automation account Under 'Assets' from the Azure Automation account Resources section select 'to add in Modules to the runbook. To execute key vault cmdlets in the runbook, we need to add AzureRM.profile and AzureRM.key vault. Step 3: Create a connection resource in the Azure Automation account You can use the sample code below, taken from the AzureAutomationTutorialScript example runbook, to authenticate using the Run As account to manage Resource Manager resources with your runbooks. The AzureRunAsConnection is a connection asset automatically created when we created 'run as accounts' above. This can be found under Assets -> Connections. After the authentication code, run the same code above to get all the keys from the vault.

```
$connectionName = "AzureRunAsConnection"
try{# Get the connection "AzureRunAsConnection "
$servicePrincipalConnection=Get-AutomationConnection -Name $connectionName
"Logging in to Azure..."
Add-AzureRmAccount ` -ServicePrincipal ` -TenantId
$servicePrincipalConnection.TenantId ` -ApplicationId
$servicePrincipalConnection.ApplicationId ` -CertificateThumbprint
$servicePrincipalConnection.CertificateThumbprint}
