NEW QUESTION: 1A. Option DB. Option CC. Option BD. Option AAnswer: D

NEW QUESTION: 2What is the maximum suction time for a patient with a tracheostomy?**A. 5 secondsB. 30 secondsC. 10 secondsD. 1 minuteAnswer: C****Explanation:**The nurse would want to limit suctioning to 10 seconds through a tracheostomy. Hypoxemia can be caused by prolonged suctioning and will stimulate the pacemaker cells in the heart. This could lead to a vasovagal response, which will cause bradycardia. The patient will need to be preoxygenated prior to suctioning.

NEW QUESTION: 3Refer to Scenario 2.A customer is looking to modernize their backup infrastructure. The current environment consists of a single centralized data center and several remote sites. The centralized data center hosts all core services and applications. The remote office primarily consists of sales personnel with 4000 use-North America, 500 in Europe, and 300 in Asia using file servers.The current backup environment at the primary site uses CommVault backing up to a Fibre Channel tape library that contains four ITO-4 tape drives. Currently they are backing up a number of file servers as well as several databases that have average change rates of 7% daily Remote office backups are currently performed by having users copy files to regional file servers that are then backed up to tape.In the past few months, the customer has experienced problems with getting backups to finish within their defined windows as well as issues with the tape library hardware. They now have concerns about gaps in their backup coverage as well as the reliability of the tape media. In addition, an internal audit shows a large amount of user-generated data is unprotected on remote user laptops.The customer is looking for a common platform to standardize their backups. They want a solution which allows for a centralized infrastructure so -they do not need to rely on remote resources to address hardware and software issues. The other goal is to move away from tape to a more reliable disk-based solution.The customer is evaluating EMC Avamar as a possible solution to backup their remote users. They are estimating that each machine will take approximately 10 minutes to backup. They would like all backups to complete in 8 hours.What is the minimum number of storage nodes needed to support the necessary connections to complete the backups of the North American system in the defined window?**A. 0B. 1C. 2D. 3Answer: B**
