**NEW QUESTION: 1**Scenario: A user browses to a page and is presented with a warning that he is trying to enter a web site with an untrusted certificate. The network engineer had added the correct certificate to the SSL virtual server. What could be the cause of this issue?**A.** The certificate is not linked to the intermediate CAB**B.** The certificate has expired and needs to be renewed.**C.** The CA certificate has not been added to the SSL virtual server.**D.** TLS is disabled on the virtual server.**Answer: A**

**NEW QUESTION: 2****A.** Option AB**B.** Option BC**C.** Option CD**D.** Option D**Answer: A**

**NEW QUESTION: 3**True or False: You can post a simulation run for the leading ledger to analyze the effects of the currency valuation on your P&L standings.**A.** True**B.** False**Answer: B**  
Explanation: Simulations runs are executed not for standard ledgers but for extension ledgers. The extension ledger then must be defined as a simulation extension ledger.

**NEW QUESTION: 4**An IS auditor is reviewing a project that is using an Agile software development approach. Which of the following should the IS auditor expect to find?**A.** Postiteration reviews that identify lessons learned for future use in the project**B.** Extensive use of software development tools to maximize team productivity**C.** Use of a process-based maturity model such as the capability maturity model (CMM)**D.** Regular monitoring of task-level progress against schedule**Answer: A**  
Explanation: A key tenet of the Agile approach to software project management is team learning and the use of team learning to refine project management and software development processes as the project progresses. One of the best ways to achieve this is that, at the end of each iteration, the team considers and documents what worked well and what could have worked better, and identifies improvements to be implemented in subsequent iterations. CMM and Agile really sit at opposite poles. CMM places heavy emphasis on predefined formal processes and formal project management and software development deliverables. Agile projects, by contrast, rely on refinement of process as dictated

by the particular needs of the project and team dynamics. Additionally, less importance is placed on formal paper-based deliverables, with the preference being effective informal communication within the team and with key outside contributors. Agile projects produce releasable software in short iterations, typically ranging from 4 to 8 weeks. This, in itself, instills considerable performance discipline within the team. This, combined with short daily meetings to agree on what the team is doing and the identification of any impediments, renders task-level tracking against a schedule redundant. Agile projects do make use of suitable development tools; however, tools are not seen as the primary means of achieving productivity. Team harmony, effective communications and collective ability to solve challenges are of
