**NEW QUESTION: 1** On an Avaya IP Office, where can you check newly created extensions and users, and "who" created them?  
**A.** Monitor **B.** Manager **C.** Extension form **D.** Audit trail  
**Answer: B**

**NEW QUESTION: 2** You have developed a new process and transported it to a production environment using XML Open Gateway (XOG). To make the process operational, which step do you need to perform?  
**A.** Run the Execute a Process job. **B.** Change Mode to Active. **C.** Validate the process only. **D.** Validate and activate the process.  
**Answer: D**

**NEW QUESTION: 3** Typically, exit criteria may consist of:  
**A.** Adequacy of the test approaches taken. **B.** Estimates of defect density or reliability measures. **C.** Discussions on disaster recovery. **D.** Defining the amount, level of detail structure, and templates for the test documentation.  
**Answer: B**

**NEW QUESTION: 4** DRAG DROP  
**Answer:** Explanation: Explanation: \*Rule with lower order are applied first. \*We can selectively permit or deny network traffic (in the management portal or from PowerShell) for a virtual machine input endpoint by creating rules that specify "permit" or "deny". By default, when an endpoint is created, all traffic is permitted to the endpoint. So for that reason, it's important to understand how to create permit/deny rules and place them in the proper order of precedence to gain granular control over the network traffic that you choose to allow to reach the virtual machine endpoint. Note that at the instant you add one or more "permit" ranges, you are denying all other ranges by default. Moving forward from the first permit range, only packets from the permitted IP range will be able to communicate with the virtual machine endpoint.
