NEW QUESTION: 2What NTP Stratum level is a server that is connected directly to an authoritative time source?**A.** Stratum 1**B.** Stratum 14**C.** Stratum 0**D.** Stratum 15**Answer: A**
Explanation:The stratum levels define the distance from the reference clock. A reference clock is a stratum 0 device that is assumed to be accurate and has little or no delay associated with it. Stratum 0 servers cannot be used on the network but they are directly connected to computers which then operate as stratum-1 servers. A stratum 1 time server acts as a primary network time standard. A stratum 2 server is connected to the stratum 1 server; then a stratum 3 server is connected to the stratum 2 server and so on. A stratum 2 server gets its time via NTP packet requests from a stratum 1 server. A stratum 3 server gets its time via NTP packet requests from a stratum-2 server... A stratum server may also peer with other stratum servers at the same level to provide more stable and robust time for all devices in the peer group (for example a stratum 2 server can peer with other stratum 2 servers). NTP uses the concept of a stratum to describe how many NTP hops away a machine is from an authoritative time source. A stratum 1 time server typically has an authoritative time source (such as a radio or atomic clock, or a Global Positioning System (GPS) time source) directly attached, a stratum 2 time server receives its time via NTP from a stratum 1 time server, and so on. NEW QUESTION: 3Your company has recently acquired a new subsidiary company in Quebec. The Active Directory administrators of the subsidiary company must use the French-language version of the administrative templates. You create a folder on the PDC emulator for the subsidiary domain in the path %systemroot%\SYSVOL\domain\Policies\PolicyDefinitions\FR. You need to ensure that the French-language version of the templates is available. What should you do?**A.** Copy the Install.WIM file from the French local installation media for Windows Server 2008 R2 to the FR folder on the subsidiary PDC emulator.**B.** Download the Conf.adm, System.adm, Wuau.adm, and Inetres.adm files from the Microsoft Web site. Copy the ADM files to the FR folder.**C.** Copy the ADMX files from the French local installation media for Windows Server 2008 R2 to the FR folder on the subsidiary PDC emulator.**D.** Copy the ADML files from the French local installation media for Windows Server 2008 R2 to the FR folder on the subsidiary PDC emulator.**Answer: D**
Explanation:
<http://technet.microsoft.com/en-us/library/cc772507%28v=ws.10%29.aspx>.adm and .adml File Structure
In order to support the multilingual display of policy settings, the ADMX file structure must be broken into two types of files:-A language-neutral file, .adm, describing the structure of the categories and Administrative template policy settings displayed in the Group

Policy Management Console (GPMC) or Local Group Policy Editor.-A set of language-dependent files, .adml, providing the localized portions displayed in the GPMC or Local Group Policy Editor. Each .adml file represents a single language you wish to support.Language-neutral file (.adm) structure..Language resource file (.adml) structureThe language resource files, .adml, provide the language specific information needed by the languagenutral file. The language neutral file will then reference specific sections of the language resource file in order for the GPMC or Local Group Policy Editor to display a policy setting in the correct language...
