**NEW QUESTION: 1** Which feature enables LDAP support on the IBM DS8880 family? **A.** The isolated key server **B.** Data Protection license feature code **C.** LDAP proxy server **D.** Copy Services Manager **Answer: D**  
**Explanation:** IBM Copy Services Manager (CSM) is a replication management solution that is based on the IBM Tivoli Productivity Center for Replication technology. CSM as installed on the HMC, or acquired separately, includes a lightweight build of the IBM WebSphere Liberty server code, to use to authenticate CSM users through a Lightweight Directory Access Protocol (LDAP). The same integrated LDAP support can be used for remote authentication of DS8000 users. Furthermore, if you simply want to take advantage of the CSM LDAP client for DS8000 LDAP authentication, the CSM license and CSM activation are not required. **References:** <https://www.redbooks.ibm.com/Redbooks.nsf/RedbookAbstracts/redp5356.html?Open>

**NEW QUESTION: 3** Your company has deployed several virtual machines (VMs) on-premises and to Azure. Azure ExpressRoute has been deployed and configured Azure connectivity. Several VMs are exhibiting network connectivity issues. You need to analyze the network traffic to determine whether packets are being allowed or denied to the VMs. **Solution:** Install and configure the Operations Management Suite (OMS) and Dependency Agents on all VMs. Use the Wire Data solution in Azure Log Analytics to analyze the network traffic. Does the solution meet the goal? **A.** Yes **B.** No **Answer: A**  
**Explanation:** Wire Data looks at network data at the application level, not down at the TCP transport layer. The solution doesn't look at individual ACKs and SYNs. Once the handshake is completed, it is considered a live connection and marked as Connected. That connection stays live as long as both sides agree the socket is open and data can pass back and forth. Once either side closes the connection, it is marked as Disconnected. Therefore, it only counts the bandwidth of successfully completed packets, it doesn't report on resends or failed packets. **Reference:** <https://docs.microsoft.com/en-us/azure/log-analytics/log-analytics-wire-data>

**C.** The value today of future cash flow  
**D.** The present value of cash inflow less the present value of cash outflow
