NEW QUESTION: 1Your network contains an Active Directory domain named contoso.com. Some user accounts in the domain have the P.O. Box attribute set. You plan to remove the value of the P.O. Box attribute for all of the users by using Ldifde. You have a user named User1 who is located in the Users container. How should you configure the LDIF file to remove the value of the P.O. Box attribute for User1? To answer, select the appropriate options in the answer area.

Answer: Explanation:

NEW QUESTION: 2In an EMC Avamar backup, what is the role of sticky-byte factoring?**A.** Consistently creates 24 KB chunks**B.** Determines which files to chunk**C.** Determines which chunks are sent to the Avamar server**D.** Consistently produces the same chunk result on unchanged data**Answer: D**Explanation:ExplanationThe Avamar agent running on the backup client (avtar) traverses each directory in the backup. For each file in the backup:1. Avtar checks the client's file cache to see if the file has been backed up before. Files that have been previously backed up are skipped from processing.2. If there is no match in the file cache, sticky-byte factoring divides the file data into variable-sized chunks.3. Each data chunk may be compressed.4. Each compressed data chunk is hashed. The hash created from a data chunk is referred to as an atomic hash. Atomic hashes are combined to create Composites. The number of composites equals the depth of the file system being backed up.

NEW QUESTION: 3どの2つのステートメントはOracle Direct Network Fileシステム (DNFS) について正しいですか。**A.**

これはOSのファイルシステムキャッシュを利用しています。**B.** Oracle Disk Managerはオペレーティング・カーネルのNFSドライバを使用せず、独自にNFSを管理することができます。**C.**

ダイレクトNFSはI/Oトラフィックを複数のネットワークアダプタ間でロードバランスすることができます。**D.** 伝統的なNFSマウントはDirect NFSを使用する場合には必要ありません。**E.**

ダイレクトNFSはUNIXプラットフォームで利用可能です。**Answer: B,C**Explanation:

E:Performance is improved by load balancing across multiple network interfaces (if available).
Note:* To enable Direct NFS Client, you must replace the standard Oracle Disk Manager (ODM) library with one that supports Direct NFS Client. Incorrect: Not A: Direct NFS Client is capable of performing concurrent direct I/O, which bypasses any operating system level caches and eliminates any operating system write-ordering locks Not B:* To use Direct NFS Client, the NFS file systems must first be mounted and available over regular NFS mounts.* Oracle Direct NFS (dNFS) is an optimized NFS (Network File System) client that provides faster and more scalable access to NFS storage located on NAS storage devices (accessible over TCP/IP). Not D: Direct NFS is provided as part of the database kernel, and is thus available on all supported database platforms - even those that don't support NFS natively, like Windows. Note:* Oracle Direct NFS (dNFS) is an optimized NFS (Network File System) client that provides faster and more scalable access to NFS storage located on NAS storage devices (accessible over TCP/IP). Direct NFS is built directly into the database kernel - just like ASM which is mainly used when using DAS or SAN storage.* Oracle Direct NFS (dNFS) is an internal I/O layer that provides faster access to large NFS files than traditional NFS clients.
