NEW QUESTION: 3 The Huawei PID module is only used in the isolated grid-connected system, and there is no electrical connection between the AC side and the DC side of the inverter. **A.** False **B.** True **Answer: B**

NEW QUESTION: 4 An organization has launched 5 instances: 2 for production and 3 for testing. The organization wants a particular group of IAM users to access only the test instances and not the production ones. They want to deploy the instances in various locations based on the factors that will change from time to time, especially in the test group. They expect instances will often need to be churned, i.e. deleted and replaced, especially in the testing group. This means the five instances they have created now will soon be replaced by a different set of five instances. The members of each group, production and testing, will not change in the foreseeable future. Given the situation, what choice below is the most efficient and time-saving strategy to define the IAM policy? **A.** By creating an IAM policy with a condition that allows access to only small instances **B.** By defining the tags on the test and production team members IAM user IDs, and adding a condition to the IAM policy that allows access to specific tags **C.** By defining the IAM policy that allows access based on the instance ID **D.** By launching the test and production instances in separate regions and allowing region wise access to the group **Answer: B** **Explanation:** Explanation AWS Identity and Access Management is a web service that allows organizations to manage users and user permissions for various AWS services. The user can add conditions as a part of the IAM policies. The condition can be set on AWS Tags, Time, and Client IP as well as on various parameters. If the organization wants the user to access only specific instances, he should define proper tags and add to the IAM policy condition. The sample policy
