**A.** bit error rate tester  
**B.** spectrum analyzer  
**C.** continuity tester

**NEW QUESTION: 2** MFA 인증을 받은 경우에만 S3의 버킷을 나열하는 데 사용할 수 있는 사용자 지정 IAM 정책을 설계하고 있습니다. 다음 중이 요구 사항에 가장 적합한 것은 무엇입니까?  
**A.** 옵션  
**B.** 옵션  
**C.** 옵션  
**D.** 옵션  
**Answer: B**  
**Explanation:** The Condition clause can be used to ensure users can only work with resources if they are MFA authenticated. Option B and C are wrong since the aws:MultiFactorAuthPresent clause should be marked as true. Here you are saying that only if the user has been MFA activated, that means it is true, then allow access. Option D is invalid because the "boolean" clause is missing in the evaluation for the condition clause. Boolean conditions let you construct Condition elements that restrict access based on comparing a key to "true" or "false." Here in this scenario the boolean attribute in the condition element will return a value True for option A which will ensure that access is allowed on S3 resources. For more information on an example on such a policy, please visit the following URL:

This occurs because the ppp authentication chap callin command is configured on Router 1. This is an example of a unidirectional authentication. In this setup, the ppp chap hostname alias-r1 command is configured on Router 1. Router 1 uses "alias-r1" as its hostname for CHAP authentication instead of "r1." The Router 2 dialer map name should match Router 1's ppp chap hostname; otherwise, two B channels are established, one for each direction.
