NEW QUESTION: 1 You have an Azure subscription named Subscription1 that contains the resources shown in the following table. The status of VM1 is Running. You assign an Azure policy as shown in the exhibit. (Click the Exhibit tab.) You assign the policy by using the following parameters: For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point. **Answer:** Explanation: Explanation Not allowed resource types (Deny): Prevents a list of resource types from being deployed. This means this policy specifically prevents a list of resource types from being deployed. So that refers that except deployment all the other operations like start/stop or move etc. are not prevented. But to be noted if the resource already exists, it just marks it as non-compliant. Replicated this scenario in LAB keeping VM running and below are the outcome: * VM is not deallocated * Able to stop and start VM successfully. * Not able to create new virtual network or VM. * Not able to modify VM size. * Not able change the address space of the virtual network. * Successfully moved virtual network and VM in another resource group. Statement 1 : Yes Based on above experiment the policy will mark the VNET1 as non-compliant but it can be moved to RG2. Hence this statement is true. Statement 2 : No Based on above experiment the policy will mark the VM as non-compliant but it will still be running, not deallocated. Hence this statement is False. Statement 3 : No Based on above experiment the address space for VNET2 can not be modified. Hence this statement is False. You are configuring a new server for testing purposes. You want to allow connections only by the clients that have new-format passwords. Which of the following steps will you take to accomplish the task? **A. Start the server with the --secure-auth option. B. Start the server with the --old-password option. C. Start the server with the --enable-named-pipe option. D. Start the server with the --shared-memory option.** **Answer: A** Explanation: According to the question, the network

contains both new and old clients and you have to allow only the new clients that support new-format passwords. In order to accomplish the task, you will have to start the server with the --secure-auth option. This will cause the server to reject connection attempts from any client that has a password in the old format. Answer D and C are incorrect. These options enable shared memory and named-pipe connection protocols, so that in a Windows server the local clients can use either of these connections to connect with the server. Answer A is incorrect. This option will provide support for the older clients.
