**NEW QUESTION: 1**What is one benefit of PVST+?**A.** PVST+ reduces the CPU cycles for all the switches in the network.**B.** PVST+ automatically selects the root bridge location, to provide optimized bandwidth usage.**C.** PVST+ supports Layer 3 load balancing without loops.**D.** PVST+ allows the root switch location to be optimized per VLAN.**Answer: D**Explanation:The PVST+ provides Layer 2 load-balancing for the VLAN on which it runs. You can create different logical topologiesby using the VLANs on your network to ensure that all of your links are used but that no one link is oversubscribed.Each instance of PVST+ on a VLAN has a single root switch. This root switch propagates the spanning-tree informationassociated with that VLAN to all other switches in the network. Because each switch has the same information aboutthe network, this process ensures that the network topology is maintained and optimized per VLAN.Reference: http://www.cisco.com/en/US/docs/switches/lan/catalyst3750x_3560x/software/release/12.2_55_se/configuration/guide/swstp.html

**NEW QUESTION: 2**
