**NEW QUESTION: 1**Your network contains an Active Directory forest named contoso.com. The domain contains three servers. The servers are configured as shown in the following table. You need to identify which server role must be deployed to the network to support the planned implementation. Which role should you identify? **A.** Network Policy and Access Services **B.** Windows Deployment Services **C.** Active Directory Rights Management Services **D.** Volume Activation Services **Answer: B** Explanation: Windows Deployment Services (WDS) is a server role that enables you to remotely deploy Windows operating systems. You can use it to set up new computers by using a network-based installation. This means that you do not have to install each operating system directly from a CD, USB drive or DVD. To use Windows Deployment Services, you should have a working knowledge of common desktop deployment technologies and networking components, including Dynamic Host Configuration Protocol (DHCP), Domain Name System (DNS), and Active Directory Domain Services (AD DS). It is also helpful to understand the Preboot execution Environment (also known as Pre-Execution Environment).
