LOG\_CHECKPOINT\_INTERVALパラメーターの値は、FAST\_START\_MTTR\_TARGETパラメーターの値をオーバーライドします。**C.**

クラッシュ後のインスタンスのリカバリにかかる時間は、常にFAST\_START\_MTTR\_TARGETパラメータに設定された値とまったく同じです。**Answer: B,C**Explanation:Explanation

The FAST\_START\_MTTR\_TARGET initialization parameter lets you specify in seconds the expected "mean time to recover" (MTTR), which is the expected amount of time Oracle takes to perform crash or instance recovery for a single instance. To enable MTTR advisory, set the initialization parameter FAST\_START\_MTTR\_TARGET to a nonzero value. If FAST\_START\_MTTR\_TARGET is not specified, then MTTR advisory will be OFF. When specified, FAST\_START\_MTTR\_TARGET is overridden by LOG\_CHECKPOINT\_INTERVAL. Note: The default value is 0. Range of values is 0 to 3600 seconds. References:

Which of the following should be applied in order to achieve confidentiality and integrity of all data across the link?**A. IPSec VPN tunnels on top of the MPLS link.****B. HTTPS and SSH for all application flows.****C. MPLS should be run in IPVPN mode.****D. SSL/TLS for all application flows.****Answer: A****Explanation:**IPSec can very well be used with MPLS. IPSec could provide VPN tunnels on top of the MPLS link. Internet Protocol Security (IPSec) isn't a tunneling protocol, but it's used in conjunction with tunneling protocols. IPSec is oriented primarily toward LAN-to-LAN connections, but it can also be used with dial-up connections. IPSec provides secure authentication and encryption of data and headers; this makes it a good choice for security.
