NEW QUESTION: 2An engineer is attempting to improve OSPF network performance and discovers that the entire SPT recomputes whenever a type 1 or type 2 LSA is received within an area. Which action can optimize SPT operations?**A.** Summarize networks on all ABRs.**B.** Configure totally stubby areas throughout the domain.**C.** Tune LSA throttling thresholds.**D.** Enable incremental SPF.**Answer: D**Explanation:
https://www.cisco.com/c/en/us/td/docs/ios/12_0s/feature/guide/ospfispf.html#wp1027184
"Benefits of OSPF Incremental SPF OSPF uses Dijkstra's SPF algorithm to compute the shortest path tree (SPT). During the computation of the SPT, the shortest path to each node is discovered. The topology tree is used to populate the routing table with routes to IP networks. When changes to a Type-1 or Type-2 link-state advertisement (LSA) occur in an area, the entire SPT is recomputed. In many cases, the entire SPT need not be recomputed because most of the tree remains unchanged. Incremental SPF allows the system to recompute only the affected part of the tree. Recomputing only a portion of the tree rather than the entire tree results in faster OSPF convergence and saves CPU resources. Note that if the change to a Type-1 or Type-2 LSA occurs in the calculating router itself, then the full SPT is performed. Incremental SPF is scheduled in the same way as the full SPF. Routers enabled with incremental SPF and routers not enabled with incremental SPF can function in the same internetwork."

NEW QUESTION: 3What effect does an increase in a Deferred Tax Asset have on Income Tax Expense?**A.** Decrease**B.** No effect**C.** Increase**Answer: A**Explanation:A Deferred Tax Asset results from temporary differences that increase current taxable income compared to current pretax accounting income. This expense should not be recorded on an accrual basis until incurred in a future period. For this reason, an increase in a Deferred Tax Asset decreases the current period's Income Tax Expense.
