NEW QUESTION: 2 An network engineer is deploying VRF on ASBR router R1. The interface must have connectivity over an MPLS VPN inter-AS Option AB network. Which configuration must the engineer apply on the router to accomplish this task?A)B)C)D)**A.** Option B**B.** Option C**C.** Option A**D.** Option D**Answer: D**

NEW QUESTION: 3A. Option B**B.** Option E**C.** Option F**D.** Option C**E.** Option A**F.** Option D **Answer: B,E,F**Explanation:ExplanationAmazon RDS Read Replicas provide enhanced performance and durability for database (DB) instances. This replication feature makes it easy to elastically scale out beyond the capacity constraints of a single DB Instance for read-heavy database workloads. You can create one or more replicas of a given source DB Instance and serve high-volume application read traffic from multiple copies of your data, thereby increasing aggregate read throughput For more information on Read Replica's please refer to the below link:https://aws.amazon.com/rds/details/read-replicas/Sharding is a common concept to split data across multiple tables in a database For more information on sharding please refer to the below link:* https://forums.awsa mazon.com/thread jspa?messagelD=203052Amazon OastiCache is a web service that makes it easy to deploy, operate, and scale an in-memory data store or cache in the cloud. The service improves the performance of web applications by allowing you to retrieve information from fast, managed, in-memory data stores, instead of relying entirely on slower disk-based databases Amazon OastiCache is an in-memory key/value store that sits between ycbetappiicipiJGra arcdalie data store (database) that it accesses. Whenever your application requests data, it first makes the request to the DastiCache cache. If the data exists in the cache and is current, OastiCache returns the data to your application. If the data does not exist in the cache, or the data in the cache has expired, your application requests the data from your data store which returns the data to your application. Your application then writes the data received from the store to the cache so it can be more quickly

retrieved next time it is requested. For more information on Elastic Cache please refer to the below link:* https://aws.amazon.com/elasticache/Option B is not an ideal way to scale a databaseOption C is not ideal to store the data which would go into a database because of the message size Option F is invalid because Multi-AZ feature is only a failover option
