NEW QUESTION: 1An EMC Avamar customer has been backing up their SharePoint farm consisting of one web front-end, an application server, and a database server. They want to recover only one web application. What is a requirement to perform this restore?
A. The restore must be directly to the production SharePoint server.
B. A Recovery Database must be used for the restored data.
C. The application server must be selected from the Backup and Restore window.
D. A third-party SharePoint data recovery tool must be used.
Answer: D

NEW QUESTION: 2Refer to the exhibit. An engineer is trying to generate a summary route in OSPF for network 10.0.0.0/8, but the summary route does not show up in the routing table. Why is the summary route missing?
A. The summary route is not visible on this router, but it is visible on other OSPF routers in the same area.
B. The summary route is visible only in the OSPF database, not in the routing table.
C. The summary-address command is used only for summarizing prefixes between areas.
D. There is no route for a subnet inside 10.0.0.0/8, so the summary route is not generated.
Answer: D
Explanation: Explanation The summary-address is only used to create aggregate addresses for OSPF at an autonomous system boundary. It means this command should only be used on the ASBR when you are trying to summarize externally redistributed routes from another protocol domain or you have a NSSA area. But a requirement to create a summarized route is: The ASBR compares the summary route's range of addresses with all routes redistributed into OSPF on that ASBR to find any subordinate subnets (subnets that sit inside the summary route range). If at least one subordinate subnet exists, the ASBR advertises the summary route.

NEW QUESTION: 3Which ITIL component focuses on ensuring that system resources, processes, and personnel are properly allocated to meet SLA requirements?
A. Continuity management
B. Availability management
C. Problem management
D. Configuration management
Answer: B
Explanation: Availability management is focused on making sure system resources, processes, personnel, and toolsets are properly allocated and secured to meet SLA requirements. Continuity management (or business continuity management) is focused on planning for the successful restoration of systems or services after an unexpected outage, incident, or disaster. Configuration management tracks and maintains detailed information about all IT components within an organization. Problem management is focused on identifying and mitigating known problems and deficiencies before they occur.

NEW QUESTION: 4According to the Financial Action Task Force Special Recommendations on Terrorist Financing, which of the following should an anti-money laundering specialist do if the specialist has reasonable grounds to suspect funds are linked or related to terrorist acts?
A. Inform the institution's managing Board.
B. Conduct a full due diligence review of the client.
C. Contact the institution's legal advisor.
D. Promptly report to the competent authority.
Answer: D
