NEW QUESTION: 1 Which two options are the Layer 3 Routing protocols? (Choose two.)
A. 802.3ad **B.** MPLS **C.** LLDP **D.** BGP **E.** OSPF
Answer: D,E

NEW QUESTION: 2 Which solution can help reduce cost and minimize service disruptions through automated service request handling efficient change management, and optimized asset lifecycle management across IT and enterprise domains?
A. A comprehensive IT asset and service management solution.
B. A proactive service level agreement modeling and enforcement solution.
C. An automated, self-service catalog for requesting end-to-end service provisioning.
D. An integrated accounting and procurement solution.
Answer: A

NEW QUESTION: 3 You have a server named Server1 that runs Windows Server 2012 R2. You download and install the Microsoft Online Backup Service Agent on Server1. You need to ensure that you can configure an online backup from Windows Server Backup. What should you do first?
A. From the Services console, modify the Log On settings of the Microsoft Online Backup Service Agent.
B. From Computer Management, add the Server1 computer account to the Backup Operators group.
C. From a command prompt, run wbadmin.exe enable backup.
D. From Windows Server Backup, run the Register Server Wizard.
Answer: D
Explanation: Download and install the Windows Azure Online Backup Agent After you create an account on the Windows Azure Online Backup website, you can download the Windows Azure Online Backup Agent and install it locally. An Online Backup node then appears in the navigation pane of the Windows Server Backup console, as shown in Figure 12- If you prefer, you can also configure online backups from the Windows Azure Online Backup console, which becomes available after you install the agent. The Windows Azure Online Backup console provides exactly the same set of options as the Online Backup node in the Windows Server Backup console. Register server The next step is to register your server. Registering a server enables you to perform backups from that same server only. (Remember this point for the exam.) To register the server, from the Actions menu, select Register Server. The Register Server Wizard includes two configuration steps. First, you are given an opportunity to specify a proxy server if desired. Second, you are

asked to provide a passphrase that will be used to encrypt your backup data and a location to save this passphrase in a file. You need to provide this passphrase when you perform a restore operation, so it's essential that you don't lose it. (Microsoft doesn't maintain a copy of your passphrase.) A Generate Passphrase option creates the passphrase for you automatically. After you register a server, new options for Online Backup appear in the Actions pane, including ScheduleBackup, Recover Data, Change Properties, and Unregister Server.

NEW QUESTION: 4What is the port number of the IPsec Encapsulating Security Payload packet?**A.** TCP port 51**B.** IP protocol 51**C.** UDP port 50**D.** UDP port 51**E.** IP protocol 50**F.** TCP port 50**Answer: E****Explanation:**6.2. Managed Security services traversing the core AH operates directly on top of IP, using IP protocol number 51. ESP operates directly on top of IP, using IP protocol number 50.
