There were 7-9 new questions and the rest questions were from [Reliable H19-414 V1.0 Exam Tutorial](#) these two dumps, We are 7*24 on-line service support; skilled service staff will solve any problem soon in two hours.

The users of our WELL-AP exam materials are really very extensive, The disadvantage is that SOFT (PC Test Engine) of WELL-AP test dump is only available for Window system (personal computer).

Convenience for reading and support for printing **New WELL-AP Test Fee** in PDF version, Not corresponding exams, This is a great way to prepare for a lab exam.

NEW QUESTION: 1 Click the Exhibit button. Referring to the exhibit, why are R1 and R2 not exchanging routes between their VPNs?
A. The IP addresses in the BGP configuration must be in the same subnet.
B. The interfaces unit numbers must be the same on both sides.
C. The route distinguishers are not properly configured.
D. The route targets are not properly configured.

Answer: D

NEW QUESTION: 2 You use Microsoft Visual Studio 2010 and Microsoft .NET Framework 4.0 to create a Windows Communication Foundation (WCF) Data Services service. You deploy the data service to the following URL: `http://contoso.com/Northwind.svc`. You need to update the City property of the Customer record that has its ID value as 123. You also need to preserve the current values of the remaining properties. Which HTTP request should you use?
A. PUT /Northwind.svc/Customers(123) Host: contoso.com Content-Type: application/json { City: 'Seattle' }
B. PUT /Northwind.svc/Customers(123) Host: contoso.com Accept: application/json { City: 'Seattle' }
C. MERGE /Northwind.svc/Customers(123) Host: contoso.com Content-Type: application/json { City: 'Seattle' }
D. MERGE /Northwind.svc/Customers(123) Host: contoso.com Accept: application/json { City: 'Seattle' }
Answer: C
Explanation: HTTP Actions OData supports the following HTTP actions to perform create, read, update, and delete operations on the entity data that the addressed resource represents: HTTP GET - This is the default action when a resource is accessed from a browser. No payload is supplied in the request message, and a response method with a payload that contains the requested data is returned. HTTP POST - Inserts new entity data into the supplied resource. Data to be inserted is supplied in the payload of the request message. The payload of the response message contains the data for the newly created entity. This includes any autogenerated key values. The header also contains the URI that addresses the new entity resource. HTTP DELETE - Deletes the entity data that the specified resource represents. A payload is not present in the request or response messages. HTTP PUT - Replaces existing entity data at the requested resource with new data that is supplied in the payload of the request message. HTTP MERGE - Because of inefficiencies in executing a delete followed by an insert in the data source just to change entity data, OData introduces a new HTTP MERGE action. The payload of the request message contains the properties that must be changed on the addressed entity resource. Because HTTP MERGE is not defined in the HTTP specification, it may require additional processing to route a HTTP MERGE request through non-OData aware servers.

NEW QUESTION: 3 Which two VoIP protocols use SDP to describe streaming media sessions? (Choose two.)
A. cRTP **B.** H.323 **C.** MGCP **D.** SIP **E.** RAS **F.** SCCP
Answer: C, D
Explanation/Reference: Explanation: The Session Description Protocol (SDP), defined in RFC 2327, describes the content of sessions, including telephony, Internet radio, and multimedia applications. SDP includes information about [8]:
Media streams: A session can include multiple streams of differing content. SDP currently defines audio, video, data, control, and application as stream types, similar to the MIME types used for Internet mail.
Addresses: SDP indicates the destination addresses, which may be a multicast address, for a media stream.
Ports: For each stream, the UDP port numbers for sending and receiving are specified.
Payload types: For each media stream type in use (for example, telephony), the payload type indicates the media formats that can be used during the session.
Start and stop times: These apply to broadcast sessions, for example, a television or radio program. The start, stop, and repeat times of the session are indicated.
Originator: For broadcast sessions, the originator is specified, with contact information. This may be useful if a receiver encounters technical difficulties.

NEW QUESTION: 4 Which utilities can be used to scan for malware on a Windows server? (Choose two.)
A. Microsoft Network Monitor **B.** Ad-Aware **C.** Snort **D.** Postfix **E.** Spybot
Answer: B, D
