NEW QUESTION: 1 Which two files must be downloaded from a Cisco Unified Communications Manager server in order to build requests for the AXL API? (Choose two.) **A.** AXL_CUCM.xsd **B.** AXLEnums.xsd **C.** AXLWSDL.xml **D.** AXLSOap.xsd **E.** CUCM_AXL.json **Answer: B,D**

NEW QUESTION: 2 Refer to exhibit, which contains the output of a BGP debug command. Which statement explains why the state of the 10.200.3.1 peer is Connect? **A.** The local router has received the BGP prefixes from the remote peer. **B.** The local router is receiving BGP keepalives from the remote peer, but the local peer has not received the OpenConfirm yet. **C.** The TCP session to 10.200.3.1 has not completed the 3-way handshake. **D.** The local router is receiving the BGP keepalives from the peer, but it has not received a BGP prefix yet. **Answer: B**

NEW QUESTION: 3 Within the context of the CBK, which of the following provides a MINIMUM level of security ACCEPTABLE for an environment? **A.** A standard **B.** A guideline **C.** A procedure **D.** A baseline **Answer: D** Explanation: Explanation/Reference: Explanation: The term baseline refers to a point in time that is used as a comparison for future changes. Once risks have been mitigated and security put in place, a baseline is formally reviewed and agreed upon, after which all further comparisons and development are measured against it. A baseline results in a consistent reference point. Baselines are also used to define the minimum level of protection required. In security, specific baselines can be defined per system type, which indicates the necessary settings and the level of protection being provided. For example, a company may stipulate that all accounting systems must meet an Evaluation Assurance Level (EAL) 4 baseline. This means that only systems that have gone through the Common Criteria process and achieved this rating can be used in this department. Once the systems are properly configured, this is the necessary baseline. Incorrect Answers: B: Standards are compulsory rules indicating how hardware and software should be implemented, used, and maintained. Standards provide a means to ensure that specific technologies, applications, parameters, and procedures are carried out in a uniform way across the organization. They do not provide a minimum level of security acceptable for an environment. C: A procedure provides detailed step-by-step instructions to achieve a certain task, which are used by users, IT staff, operations staff, security members, and others. It does not provide a minimum level of security acceptable for an environment. D: Guidelines are recommended actions and operational guides for users, IT staff, operations staff, and others when a specific standard does not apply. They do not provide a minimum level of security acceptable for an environment. References: Harris, Shon, All In One CISSP Exam Guide, 6th Edition, McGraw-Hill, New York, 2013, p. 106
