NEW QUESTION: 1When should a program manager approve the closure of a component project?**A.** When program deliverables are complete**B.** When project deliverables are complete**C.** When the project has delivered the project benefits**D.** When acceptance criteria of the project are met**Answer: A**

NEW QUESTION: 2When deploying redundant route reflectors in BGP, which attribute can you configure on the route reflector to allow routes to be identified as belonging to the same group?**A.** ROUTER_ID**B.** PEER_GROUP**C.** ORIGINATOR_ID**D.** CLUSTER_ID**Answer: D****Explanation:** Together, a route reflector and its clients form a cluster. When a single route reflector is deployed in a cluster, the cluster is identified by the router ID of the route reflector. The bgp cluster-id command is used to assign a cluster ID to a route reflector when the cluster has one or more route reflectors. Multiple route reflectors are deployed in a cluster to increase redundancy and avoid a single point of failure. When multiple route reflectors are configured in a cluster, the same cluster ID is assigned to all route reflectors. This allows all route reflectors in the cluster to recognize updates from peers in the same cluster and reduces the number of updates that need to be stored in BGP routing tables.**Reference:** <http://ieoc.com/forums/t/5326.aspx>
