NEW QUESTION: 2In order to associate an Adaptive Model with each proposition, you need to _____.**A.** create an Adaptive Model rule for each proposition**B.** define the Adaptive Model instances in Adaptive Decision Manager**C.** link all propositions with an Adaptive Model decision component**D.** capture the customer's response**Answer: D**

NEW QUESTION: 3A customer has an application that is being identified as unknown-top for one of their custom PostgreSQL database connections. Which two configuration options can be used to correctly categorize their custom database application? (Choose two.)**A.** Custom Service object.**B.** Application Override policy.**C.** Custom application.**D.** Security policy to identify the custom application.**Answer: B,C****Explanation:**ExplanationUnlike the App-ID engine, which inspects application packet contents for unique signature elements, the Application Override policy's matching conditions are limited to header-based data only. Traffic matched by an Application Override policy is identified by the App-ID entered in the Application entry box.Choices are limited to applications currently in the App-ID database.Because this traffic bypasses all Layer 7 inspection, the resulting security is that of a Layer-4 firewall. Thus, this traffic should be trusted without the need for Content-ID inspection. The resulting application assignment can be used in other firewall functions such as Security policy and QoS.Use CasesThree primary uses cases for Application Override Policy are:To identify "Unknown" App-IDs with a different or custom application signature To re-identify an existing application signature To bypass the Signature Match Engine (within the SP3 architecture) to improve processing timesA discussion of typical uses of application override and specific implementation examples is here:
