NEW QUESTION: 1A. Option **AB.** Option **BC.** Option **DD.** Option **C****Answer: A,C**

NEW QUESTION: 2You administer a Windows 10 Enterprise computer that runs Hyper-V. The computer hosts a virtual machine with multiple snapshots. The virtual machine uses one virtual CPU and 512 MB of RAM.You discover that the virtual machine pauses automatically and displays the state as paused-critical.You need to identify the component that is causing the error.Which component should you identify?**A.** no virtual switch defined**B.** insufficient memory **C.** insufficient hard disk space**D.** insufficient number of virtual processors**Answer: C**

Explanation:ExplanationIn this question, the VM has "multiple snapshots" which would use up a lot of disk space. Virtual machines will go into the "Paused-Critical" state in Hyper-V if the free space on the drive that contains the snapshots goes below 200MB.One thing that often trips people up is if they have their virtual hard disks configured on one drive - but have left their snapshot files stored on the system drive. Once a virtual machine snapshot has been taken- the base virtual hard disk stops expanding and the snapshot file stores new data that is written to the disk - so it is critical that there is enough space in the snapshot storage location.

NEW QUESTION: 3The maximum charge capacity of the UPS5000-S is ().**A.** 0.3**B.** 0.2**C.** 0.4**D.** 0.1
Answer: A
