NEW QUESTION: 1Which component of the routing table ranks routing protocols according to their preferences?**A.** next hop**B.** administrative distance**C.** routing protocol code**D.** metric
Answer: B
Explanation:Administrative distance - This is the measure of trustworthiness of the source of the route. If a router learns about a destination from more than one routing protocol, administrative distance is compared and the preference is given to the routes with lower administrative distance. In other words, it is the believability of the source of the route.

NEW QUESTION: 2Which three statements are true about the shared directories defined in the /etc/exports file?**A.** By default, a directory is shared read write.**B.** By default, a directory is shared read only.**C.** By default, a directory is shared with root squashed.**D.** By default, a directory is shared sync.**E.** By default, a directory is shared with no root squashed.**Answer: B,C,D**
Explanation:ExplanationC (not A): Very often, it is not desirable that the root user on a client machine is also treated as root when accessing files on the NFS server. To this end, uid 0 is normally mapped to a different id: the so-called anonymous or nobody uid. This mode of operation (called 'root squashing') is the default, and can be turned off with no_root_squash.E: In releases of nfs-utils up to and including 1.0.0, the async option was the default. In all releases after 1.0.0, sync is the default, and async must be explicitly requested if needed.

NEW QUESTION: 3Ann, a customer, purchased a pedometer and created an account on the manufacturer's website to keep track of her progress. Which of the following technologies will Ann MOST likely use to connect the pedometer to her desktop to transfer her information to the website?**A.** NFC**B.** Tethering**C.** Infrared**D.** Bluetooth**Answer: A**
