NEW QUESTION: 1A. Option BB. Option EC. Option CD. Option AE. Option DAnswer: A,C
Explanation: B: You can only use an application profile when you deploy a virtual machine as part of a service. In this case it would be as part of the IIS service. C: Guest OS profile When you define a new Guest OS Profile you specify which Roles and features, such as IIS, which should be included in the profile. If machines based on this Guest OS Profile are going to need certain .NET framework versions installed, or have IIS installed, I can
Note: In a virtual environment, a guest operating system is the operating system that runs on a virtual machine, in contrast to the host operating system that runs on the physical host computer on which one or more virtual machines are deployed. In Virtual Machine Manager, a guest operating system profile is a collection of operating system settings that can be imported into a virtual machine template to provide a consistent operating system configuration for virtual machines created from that template.
Incorrect: Not A: Capability profiles are for managing the hypervisors. Reference: How to Create an Application Profile in a Service Deployment
