Passing the test NCP-CI-Azure certification can help you increase your wage and be promoted easily and buying our NCP-CI-Azure prep guide dump can help you pass the test smoothly.

The NCP-CI-Azure practice materials have survived the fierce competition in the market.

NEW QUESTION: 1 Assume that you have the following situation: The app code calls for R.string.text_a Three relevant resource files are available:- res/values/strings.xml, which includes text_a in the app's default language, in this case English.- res/values-mcc404/strings.xml, which includes text_a in the app's default language, in this case English.- res/values-hi/strings.xml, which includes text_a in Hindi. The app is running on a device that has the following configuration:- The SIM card is connected to a mobile network in India (MCC 404).- The language is set to Hindi (hi). Which is the correct statement below?**A.** Android loads text_a from res/values/strings.xml (in English)**B.** Android loads text_a from res/values-mcc404/strings.xml (in English)**C.** Android loads text_a from res/values-hi/strings.xml (in Hindi)**Answer: B** Explanation: Android loads text_a from res/values-mcc404/strings.xml (in English), even if the device is configured for Hindi. That is because in the resource-selection process, Android prefers an MCC match over a language match (as a priority Exception). Reference: <https://developer.android.com/guide/topics/resources/localization>

NEW QUESTION: 2 A team of Developers must migrate an application running inside an AWS Elastic Beanstalk environment from a Classic Load Balancer to an Application Load Balancer. Which steps should be taken to accomplish the task using the AWS Management Console?**A.** 1. Clone the existing environment, changing the associated load balancer type. 2. Deploy the same application version as used in the original environment. 3. Run the swap-environment-cnames action.**B.** 1. Update the application code in the existing deployment. 2. Select a new load balancer type before running the deployment. 3. Deploy the new version of the application code to the environment.**C.** 1. Create a new environment with the same configurations except for the load balancer type. 2. Deploy the same application version as used in the original environment. 3. Run the swap-environment-cnames action.**D.** 1. Edit the environment definitions in the existing deployment. 2. Change the associated load balancer type according to the requirements. 3. Rebuild the environment with the new load balancer type.**Answer: C** Explanation: Explanation <https://docs.aws.amazon.com/elasticbeanstalk/latest/dg/using-features.managing.elb.html> By default, Elastic Beanstalk creates an Application Load Balancer for your environment when

you enable load balancing with the Elastic Beanstalk console or the EB CLI. It configures the load balancer to listen for HTTP traffic on port 80 and forward this traffic to instances on the same port. You can choose the type of load balancer that your environment uses only during environment creation. Later, you can change settings to manage the behavior of your running environment's load balancer, but you can't change its type.

NEW QUESTION: 3 Which of the following indicates a case has been worked successfully in a Work Queue?
A. Option **B.** Option **C.** Option **D.** Option
Answer: C

NEW QUESTION: 4 Which of these tasks regarding capabilities of image loading may be considered as the lowest importance to the user?
