NEW QUESTION: 1 Which of the following type of IDS has self-learning functionality and over a period of time will learned what is the expected behavior of a system?
A. Neural Network based ID
B. Signature Based ID
C. Statistical based ID
D. Host Based ID
Answer: A
Explanation:
Explanation/Reference: Neural Network based IDS monitors the general patterns of activity and traffic on the network, and create a database of normal activities within the system. This is similar to statistical model but with added self-learning functionality. Also, you should know below categories and types of IDS for CISA exam: An IDS works in conjunction with routers and firewall by monitoring network usage anomalies. Broad category of IDS includes: Network based ID, Host based ID, Network Based ID. They identify attack within the monitored network and issue a warning to the operator. If a network based IDS is placed between the Internet and the firewall, it will detect all the attack attempts whether or not they enter the firewall. Host Based ID. They are configured for a specific environment and will monitor various internal resources of the operating system to warn of a possible attack. They can detect the modification of executable programs, detect the detection of files and issue a warning when an attempt is made to use a privilege account. Types of IDS includes Signature Based ID - These IDS system protect against detected intrusion patterns. The intrusive pattern they can identify are stored in the form of signature. Statistical Based ID - These system need a comprehensive definition of the known and expected behavior of system. Neural Network - An IDS with this feature monitors the general patterns of activity and traffic on the network, and create a database. This
