**B.** It saves clients time and money by providing the steps and components required for constructing a cloud implementation across all deployment models.  
**C.** Customers can leverage specific cloud architectures from other customers in similar industries.  
**D.** It saves clients time and money by dictating a 100% IBM hardware and software solution.  
**Answer: B**

**NEW QUESTION: 3** You are retrieving data from a large datastore by using Azure Machine Learning Studio. You must create a subset of the data for testing purposes using a random sampling seed based on the system clock. You add the Partition and Sample module to your experiment. You need to select the properties for the module. Which values should you select? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.  
**Answer:** Explanation: Explanation  
Box 1: Sampling  
Create a sample of data  
This option supports simple random sampling or stratified random sampling. This is useful if you want to create a smaller representative sample dataset for testing.  
1. Add the Partition and Sample module to your experiment in Studio, and connect the dataset.  
2. Partition or sample mode: Set this to Sampling.  
3. Rate of sampling. See box 2 below.  
Box 2: 03. Rate of sampling.  
Random seed for sampling: Optionally, type an integer to use as a seed value. This option is important if you want the rows to be divided the same way every time. The default value is 0, meaning that a starting seed is generated based on the system clock. This can lead to slightly different results each time you run the experiment.
