Explanation:

https://library.netapp.com/ecmdocs/ECMP1196979/html/man1/na_reallocate.1.htmlThe -p option requests that reallocation of user data take place on the physical blocks in the aggregate, but the logical block locations within a flexible volume are preserved. Aggregate reallocation is not supported on aggregates created prior to Data ONTAP 7.2. Using the -p option may reduce the extra storage requirements in a flexible volume when reallocation is run on a volume with snapshots. It may also reduce the amount of data that needs to be transmitted by SnapMirror on its next update after reallocation is performed on a SnapMirror source volume.

A. Compilation fails due to error on line 7.
B. Sum for 0 to 0 = 55
C. An Exception is thrown at the runtime.
D. Sum for 0 to 10 = 55
E. Compilation fails due to error on line 6.
Answer: AExplanation: Loop variables scope limited to that enclosing loop. So in this case, the scope of the loop variable x declared at line 5, limited to that for loop. Trying to access that variable at line 7, which is out of scope of the variable x, causes a compile time error. So compilation fails due to error at line 7. Hence option D is correct. Options A and B are incorrect, since code fails to compile. Reference:
