**NEW QUESTION: 1** Which feature can be implemented to avoid any MPLS packet loss?  
**A.** conditional label advertisement  
**B.** IP TTL propagation  
**C.** label advertisement sync  
**D.** LDP IGP sync  
**E.** PHP  
**Answer: D**  
**Explanation:** Packet loss can occur because the actions of the IGP and LDP are not synchronized. Packet loss can occur in the following situations: When an IGP adjacency is established, the router begins forwarding packets using the new adjacency before the LDP label exchange completes between the peers on that link. If an LDP session closes, the router continues to forward traffic using the link associated with the LDP peer rather than an alternate pathway with a fully synchronized LDP session.
