NEW QUESTION: 1 Which of the following is true?
A. Six Sigma methodology is only applicable to large problems causing variation in manufactured product
B. A kaizen event is held in celebration of a significant process improvement
C. The concepts of TQM are passed
D. Benchmarking should be an ongoing process contributing to continual improvement
Answer: D

NEW QUESTION: 2 What is a true statement in regards to creating custom report types?
A. When the primary object is a custom object and is deleted, then the report type and any reports created from it must be deleted manually.
B. Once a report type is saved with a standard or custom primary object, the primary object cannot be changed for that report type.
C. The detail object in a master- detail relationship cannot be added as a secondary object on a custom report type
D. Any object can be chosen unless the object is no visible to the person creating the report type through security settings
Answer: B
Explanation: Explanation You can choose from all objects-even those you don't have permission to view. This lets you build report types for a variety of users. Once you save a report type, you can't change the primary object. If the primary object on a report type is a custom object, and the custom object is deleted, then the report type and any reports created from it are automatically deleted. If you remove an object from a report type, all references to that object and its associated objects are automatically removed from reports and dashboards based on that type.
