There are ways helping you to get out.

NEW QUESTION: 1 Which of the following BEST ensures that a firewall is configured in compliance with an enterprise's security policy?**A.** Interview the firewall administrator.**B.** Review the parameter settings.**C.** Review the device's log file for recent attacks.**D.** Review the actual procedures.**Answer: B**Explanation:Explanation/Reference:Explanation:A review of the parameter settings will provide a good basis for comparison of the actual configuration to the security policy and will provide reliable audit evidence documentation.Incorrect Answers:A: While interviewing the firewall administrator may provide a good process overview, it does not reliably confirm that the firewall configuration complies with the enterprise's security policy.B: While procedures may provide a good understanding of how the firewall is supposed to be managed, they do not reliably confirm that the firewall configuration complies with the enterprise's security policy.C: While reviewing the device's log file for recent attacks may provide indirect evidence about the fact that logging is enabled, it does not reliably confirm that the firewall configuration complies with the enterprise's security policy.

NEW QUESTION: 2 Refer to the exhibit.An engineer with ID336990329 is troubleshooting this video conference issue:A video call between a Cisco 9971 in Region1 and another Cisco 8961 in Region1 works.As soon as the Cisco 9971 in Region1 conferences in a Cisco 8945 in Region2, the Region1 endpointcannot see the Region2 endpoint video.Which cause of this issue is true?**A.** Maximum Session Bit Rate for Video Calls is too low.**B.** Maximum Session Bit Rate for Immersive Video Calls is too low.**C.** Cisco 8945 does not have a camera connected.**D.** Maximum Audio Bit Rate should be increased.**Answer: D**

NEW QUESTION: 3 You have a large number of web servers in an Auto Scalinggroup behind a load balancer. On an hourly basis, you want to filter and process the logs to collect data on unique visitors, and then put that data in a durable data store in order to run reports. Web

servers in the Auto Scalinggroup are constantly launching and terminating based on your scaling policies, but you do not want to lose any of the log data from these servers during a stop/termination initiated by a user or by Auto Scaling. What two approaches will meet these requirements? Choose two answers from the optionsgiven below.**A.** Install an AWS Data Pipeline Logs Agent on every web server during the bootstrap process. Create a log group object in AWS Data Pipeline, and define Metric Filters to move processed log data directly from the web servers to Amazon Redshift and run reports every hour.**B.** On the web servers, create a scheduled task that executes a script to rotate and transmit the logs to Amazon Glacier. Ensure that the operating system shutdown procedure triggers a logs transmission when the Amazon EC2 instance is stopped/terminated. Use Amazon Data Pipeline to process the data in Amazon Glacier and run reports every hour.**C.** Install an Amazon Cloudwatch Logs Agent on every web server during the bootstrap process. Create a CloudWatch log group and define Metric Filters to create custom metrics that track unique visitors from the streaming web server logs.Create a scheduled task on an Amazon EC2 instance that runs every hour to generate a new report based on the Cloudwatch custom metrics.

Related Posts/**D.** On the web servers, create a scheduled task that executes a script to rotate and transmit the logs to an Amazon S3 bucket. Ensure that the operating system shutdown procedure triggers a logs transmission when the Amazon EC2 instance is stopped/terminated. Use AWS Data Pipeline to move log data from the Amazon S3 bucket to Amazon Redshift In order to process and run reports every hour.**Answer: C,D**Explanation:ExplanationYou can use the Cloud Watch Logs agent installer on an existing CC2 instance to install and configure the Cloud Watch Logs agent.For more information, please visit the below link:* http://docs.aws.amazon.com/AmazonCloudWatch/latest/logs/QuickStartCC2lnstance.htmlYou can publish your own metrics to Cloud Watch using the AWS CLI or an API. For more information, please visit the below link:* http://docs.aws.amazon.com/AmazonCloudWatch/latest/monitoring/publishingMetrics.html Amazon Redshift is a fast, fully managed data warehouse that makes it simple and cost-effective to analyze all your data using standard SQL and your existing Business Intelligence (Bl) tools. It allows you to run complex analytic queries against petabytes of structured data, using sophisticated query optimization, columnar storage on high-performance local disks, and massively parallel query execution. Most results come back in seconds.For more information on copying data from S3 to redshift, please refer to the below link:* http://docs.aws.amazon.com/datapipeline/latest/DeveloperGuide/dp-copydata- redshift html
