NEW QUESTION: 1 A threat advisory alert was just emailed to the IT security staff. The alert references specific types of host operating systems that can allow an unauthorized person to access files on a system remotely. A fix was recently published, but it requires a recent endpoint protection engine to be installed prior to running the fix. Which of the following MOST likely need to be configured to ensure the system are mitigated accordingly? (Select two.)
A. Antivirus
B. HIPSC. Patch management
D. Application whitelisting
E. Group policy implementation
F. Firmware updates
Answer: C,F

NEW QUESTION: 2 A company has placed a networked PC in a lobby so guests can have access to the corporate directory. A security concern is that someone will disconnect the directory PC and re-connect their laptop computer and have access to the corporate network. For the port servicing the lobby, which three configuration steps should be performed on the switch to prevent this? (Choose three.)
A. Configure the switch to discover new MAC addresses after a set time of inactivity.
B. Create the port as an access port.
C. Create the port as a protected port.
D. Set the port security aging time to 0.
E. Create the port as a trunk port.
F. Statically assign the MAC address to the address table.
G. Enable port security.
Answer: B,F,G
Explanation: Explanation/Reference: If port security is enabled and the port is only designated as access port, and finally static MAC address is assigned, it ensures that even if a physical connection is done by taking out the directory PC and inserting personal laptop or device, the connection

cannot be made to the corporate network, hence ensuring safety.
