NEW QUESTION: 2 Your company deploys a new Active Directory forest named contoso.com. The first domain controller in the forest runs Windows Server 2012. The forest contains a domain controller named DC10. On DC10, the disk that contains the SYSVOL folder fails. You replace the failed disk. You stop the Distributed File System (DFS) Replication service. You restore the SYSVOL folder. You need to perform a non-authoritative synchronization of SYSVOL on DC10. Which tool should you use before you start the DFS Replication service on DC10?
A. Dfsmgmt.msc
B. Frsutil
C. Adsiedit.msc
D. Ultrasound
Answer: C
Explanation: How to perform a non-authoritative synchronization of DFSR-replicated SYSVOL (like "D2" for FRS) In the ADSIEDIT.MSC tool modify the following distinguished name (DN) value and attribute on each of the domain controllers that you want to make non-authoritative: CN=SYSVOL Subscription, CN=Domain System Volume, CN=DFSR-LocalSettings, CN=<the server name>, OU=Domain Controllers, DC=<domain> msDFSR-Enabled=FALSE Force Active Directory replication throughout the domain. Etc. Note: * You want to force the non-authoritative synchronization of SYSVOL on a domain controller. In the File Replication Service (FRS), this was controlled through the D2 and D4 data values for the Burflags registry values, but these values do not exist for the Distributed File System Replication (DFSR) service. You cannot use the DFS Management snap-in (Dfsmgmt.msc) or the Dfsradmin.exe command-line tool to

achieve this. Unlike custom DFSR replicated folders, SYSVOL is intentionally protected from any editing through its management interfaces to prevent accidents. Reference: How to force an authoritative and non-authoritative synchronization for DFSR- replicated SYSVOL (like "D4/D2" for FRS)

これは目標を満たしていますか？ **A.** いいえ **B.** はい **Answer: A** Explanation: You need to run

NEW QUESTION: 4 DRAG DROP A manufacturer is planning to build a segregated network. There are requirements to segregate development and test infrastructure from production and the need to support multiple entry points into the network depending on the service being accessed. There are also strict rules in place to only permit user access from within the same zone. Currently, the following access requirements have been identified: 1. Developers have the ability to perform technical validation of development applications. 2. End users have the ability to access internal web applications. 3. Third-party vendors have the ability to support applications. In order to meet segregation and access requirements, drag and drop the appropriate network zone that the user would be accessing and the access mechanism to meet the above criteria. Options may be used once or not at all. All placeholders must be filled.
