NEW QUESTION: 1 IT service engineers at a large organization are unable to effectively prioritize system-generated alerts from hundreds of applications running across multiple servers and databases. As a result many alerts are often ignored, leading to major problems including downtime. Which of the following is the BEST IS audit recommendation to address this situation?
A. Group alerts from related systems and immediately escalate to the application owner.
B. Develop a classification scheme that prioritizes alerts according to potential business impact.
C. Implement a threshold management system that prioritizes alerts over a certain age.
D. Prioritize alerts from legacy applications that may require remote support from external vendors.
Answer: B

NEW QUESTION: 2 An organization wants to enable consumers to deploy IaaS and PaaS instances from a service catalog. These instances will all be deployed on a specific hypervisor. The organization has informed you that they want to use a preferred server vendor when building their new private cloud. What must be confirmed about the design?
A. IaaS instances have the compatible drivers for the physical server hardware
B. Server hardware is compatible with PaaS solution
C. Server hardware is on the hypervisor vendor's compatibility list
D. Server hardware is supported by the service catalog solution
Answer: C

NEW QUESTION: 3 A Solutions Architect is developing software on AWS that requires access to

multiple AWS services, including an Amazon EC2 instance. This is a security sensitive application, and AWS credentials such as Access Key ID and Secret Access Key need to be protected and cannot be exposed anywhere in the system. What security measure would satisfy these requirements? **A.** Enable multi-factor authentication for the AWS root account **B.** Store the AWS Access Key ID/Secret Access Key combination in software comments. **C.** Assign an IAM role to the Amazon EC2 instance. **D.** Assign an IAM user to the Amazon EC2 instance. **Answer: B**
