NEW QUESTION: 1 Consider the following scenario: Due to consistent inaccuracies and outdated real estate listings, a residential real estate company wants to build a blockchain solution that accurately depicts which homes (assets) are available for purchase across all countries/provinces. All available homes should be publicly viewable by the general consumer audience, but certain details of the home, such as history of maintenance, should only be viewable by licensed real estate professionals. Which architecture would best solve the product need?**A.** Public data hosted on a public blockchain; Privileged data hosted on a private blockchain**B.** The entire solution built on a private blockchain with proper permissions for both public and privileged data**C.** Public data hosted on a public blockchain, Privileged data security hoisted on a private database**D.** Public and privileged data on hybrid blockchain will Proof of Stake consensus**Answer: A**

NEW QUESTION: 2 Which of the following statements about just-in-time is correct?**A.** A just-in-time approach seeks to eliminate non-value-added costs**B.** Introducing just-in-time production will always increase capacity utilization**C.** Receiving raw materials in large batches

is a key feature of just-in-time purchasing **D**. Just-in-time purchasing will lead to an increase in the number of suppliers **Answer: A**

NEW QUESTION: 3 Your network contains an Active Directory domain. You plan to implement a remote access solution that will contain three servers that run Windows Server 2012. The servers will be configured as shown in the following table. Server1 will support up to 200 concurrent VPN connections. You need to ensure that all VPN connection requests are authenticated and authorized by either Server2 or Server3. The solution must ensure that the VPN connections can be authenticated if either Server2 or Server3 fails. What should you do? **A**. Add Server2 and Server3 to a Network Load Balancing (NLB) cluster. On Server1, modify the Authentication settings. **B**. On Server1, configure a RADIUS proxy. On Server2 and Server3, add a RADIUS client. **C**. On Server1, configure a RADIUS proxy. Add Server2 and Server3 to a failover cluster. **D**. On Server2 and Server3, add a RADIUS client. On Server1, modify the Authentication settings. **Answer: D**
Explanation: * A network access server (NAS) is a device that provides some level of access to a larger network. A NAS using a RADIUS infrastructure is also a RADIUS client, sending connection requests and accounting messages to a RADIUS server for authentication, authorization, and accounting. * Client computers, such as wireless portable computers and other computers running client operating systems, are not RADIUS clients. RADIUS clients are network access servers—such as wireless access points, 802.1X-capable switches, virtual private network (VPN) servers, and dial-up servers—because they use the RADIUS protocol to communicate with RADIUS servers such as Network Policy Server (NPS) servers.
