NEW QUESTION: 1A. Option DB. Option AC. Option BD. Option EE. Option CF. Option F

Answer: B,E,FExplanation:Open Shortest Path First Reference:

http://docwiki.cisco.com/wiki/Open_Shortest_Path_FirstExplanation:Additional OSPF features include equal-cost, multipath routing, and routing based on upper-layer type-of-service(TOS) requests. TOS-based routing supports those upper-layer protocols that can specify particular types of service. An application, for example, might specify that certain data is urgent. If OSPF has high-prioritylinks at its disposal, these can be used to transport the urgent datagram.OSPF supports one or more metrics. If only one metric is used, it is considered to be arbitrary, and TOS is not supported. If more than one metric is used, TOS is optionally supported through the use of a separate metric (and, therefore, a separate routing table) for each of the eight combinations created by the three IP TOS bits (the delay, throughput, and reliability bits). For example, if the IP TOS bits specify low delay, low throughput, and high reliability, OSPF calculates routes to all destinations based on this TOS designation. IP subnet masks are included with each advertised destination, enabling variable-length subnet masks. With variable-length subnet masks, an IP network can be broken into many subnets of various sizes. This provides network administrators with extra network-configuration flexibility.

NEW QUESTION: 2Drag and drop the characteristics from the left onto the routing protocols they describe on the right.**Answer:** Explanation:Explanation
