NEW QUESTION: 4 You are designing a data processing solution that will run as a Spark job on an HDInsight cluster. The solution will be used to provide near real-time information about online ordering for a retailer. The solution must include a page on the company intranet that displays summary information. The summary information page must meet the following requirements: * Display a summary of sales to date grouped by product categories, price range, and review scope. * Display sales summary information including total sales, sales as compared to one day ago and sales as compared to one year ago. * Reflect information for new orders as quickly as possible. You need to recommend a design for the solution. What should you recommend? To answer, select the appropriate configuration in the answer area. **Answer:** Explanation: Explanation Box 1: DataFrame DataFrames Best choice in most situations. Provides query optimization through Catalyst. Whole-stage code generation. Direct memory access. Low garbage collection (GC) overhead. Not as developer-friendly as DataSets, as there are no compile-time checks or domain object programming. Box 2: parquet The best format for performance is parquet with snappy compression, which is the default in Spark 2.x. Parquet stores data in columnar format, and is highly optimized in Spark.
