In order to meet the needs of all customers, [MD-102 Practice Tests](#) our company employed a lot of leading experts and professors in the field.

NEW QUESTION: 1You need to generate a report on all of the Exchange Server 2007 computers in your Exchange organization. The report must include:What should you do?**A.** Run the Get-OrganizationConfig cmdlet.**B.** Run the Test-SystemHealth cmdlet.**C.** Run the Get-ExchangeServer | Format-List cmdlet.**D.** Run the Health Check scan in the Exchange Best Practices Analyzer.**Answer: D**

NEW QUESTION: 2**A.** Option **A****B.** Option **C****C.** Option **B****D.** Option **E****E.** Option **D****Answer: C,D,E**
Explanation:**B:** In a side-by-side upgrade, SQL Server 2012 installs either along with SQL Server 2008 (or 2005) as a separate instance or on a different server. This process is essentially a new installation followed by a database migration.**D:** You can use detach and attach operations to upgrade a SQL Server 2005, SQL Server 2008 or SQL Server 2008 R2 database in SQL Server 2012. After being attached to SQL Server 2012, the database is available immediately and is automatically upgraded.**E:** One important factor to contemplate during an upgrade and migration effort are your database compatibility levels, which control certain database behaviors to be compatible with a particular version of SQL Server. Unlike the database file version (which get changed when you restore a database backup in a newer version or attach an older database to a newer version of SQL Server), the database compatibility level can be changed back and forth to different values.References:
