command-line tool used to service Windows images offline before deployment. You can use it to install, uninstall, configure, and update Windows features, packages, drivers, and international settings. Subsets of the DISM servicing commands are also available for servicing a running operating system. Windows 7 introduces the DISM command-line tool. You can use DISM to service a Windows image or to prepare a Windows PE image. DISM replaces Package Manager (Pkgmgr.exe), PEimg, and Intlcfg in Windows Vista, and includes new features to improve the experience for offline servicing. You can use DISM to perform the following actions: Prepare a Windows PE image. Enable or disable Windows features within an image. Upgrade a Windows image to a different edition. Add, remove, and enumerate packages. Add, remove, and enumerate drivers. Apply changes based on the offline servicing section of an unattended answer file. Configure international settings. Implement powerful logging features. Service operating systems such as Windows Vista with SP1 and Windows Server 2008. Service a 32-bit image from a 64-bit host and service a 64-bit image from a 32-bit host. Service all platforms (32-bit, 64-bit, and Itanium). Use existing Package Manager scripts. NOT Driverquery Enables an administrator to display a list of installed device drivers and their properties. If used without parameters, driverquery runs on the local computer. (Could not see documentation of images, only computers, therefore assumed this command does not support images)/si Displays digital signature information for both signed and unsigned device drivers.
