注：それぞれの正しい選択には1ポイントの価値があります。**Answer:** Explanation:Explanation: Scenario: TestingYou must produce multiple partitions of a dataset based on sampling using the Partition and Sample module in Azure Machine Learning Studio.Box 1: Assign to foldsUse Assign to folds option when you want to divide the dataset into subsets of the data. This option is also useful when you want to create a custom number of folds for cross-validation, or to split rows into several groups.Not Head: Use Head mode to get only the first n rows. This option is

useful if you want to test a pipeline on a small number of rows, and don't need the data to be balanced or sampled in any way. Not Sampling: The Sampling option supports simple random sampling or stratified random sampling. This is useful if you want to create a smaller representative sample dataset for testing. Box 2: Partition evenly Specify the partitioner method: Indicate how you want data to be apportioned to each partition, using these options:
