NEW QUESTION: 1A. Option DB. Option CC. Option BD. Option AE. Option EF. Option F
Answer: D,EExplanation:Give access to CustomerSupport through a view. The view must include allthese columns (refer to scenario).GRANT Object Permissions (Transact-SQL)Topic 4, A.DatumOverviewGeneral OverviewA). Datum Corporation has offices in Miami and Montreal. The network contains a single Active Directory forest named adatum.com. The offices connect to each other by using a WAN link that has a 5-ms latency.A). Datum standardizes its database platform by using SQL Server 2014 Standard edition.DatabasesEach office contains databases named Sales. Inventory, Customers, Products, Personnel, and Dev.Servers and databases are managed by a team of database administrators. Currently, all of the database administrators have the same level of permissions on all of the servers and all of the databases.The Customers database contains two tables named Customers and Classifications. The following graphic shows the relevant portions of the tables:The following table shows the current data in the Classifications table:The Inventory database is used mainly for reports. The database is recreated every day. A full backup of the database currently takes three hours to complete. Stored ProceduresA stored procedure named USP_1 generates millions of rows of data for multiple reports. USP_1 combines data from five different tables from the Sales and Customers databases in a table named Table1.After Table1 is created, the reporting process reads data from a table in the Products database and searches for information in Table1 based on input from the Products table. After the process is complete, Table1 is deleted.A stored procedure named USP_2 is used to generate a product list. USP_2 takes several minutes to run due to locks on the tables the procedure accesses.A stored procedure named USP_3 is used to update prices. USP_3 is composed of several UPDATE statements called in sequence from within a transaction. Currently, if one of the UPDATE statements fails, the stored procedure continues to

execute. A stored procedure named USP_4 calls stored procedures in the Sales, Customers, and Inventory databases. The nested stored procedures read tables from the Sales, Customers, and Inventory databases. USP_4 uses an EXECUTE AS clause. A stored procedure named USP_5 changes data in multiple databases. Security checks are performed each time USP_5 accesses a database. You suspect that the security checks are slowing down the performance of USP_5. All stored procedures accessed by user applications call nested stored procedures. The nested stored procedures are never called directly. Design Requirements Data Recovery You must be able to recover data from the Inventory database if a storage failure occurs. You have a Recovery Point Objective (RPO) of one hour. You must be able to recover data from the Dev database if data is lost accidentally. You have a Recovery Point Objective (RPO) of one day. Classification Changes You plan to change the way customers are classified. The new classifications will have four levels based on the number of orders. Classifications may be removed or added in the future. Management requests that historical data be maintained for the previous classifications. Security A group of junior database administrators must be able to view the server state of the SQL Server instance that hosts the Sales database. The junior database administrators will not have any other administrative rights. A). Datum wants to track which users run each stored procedure. Storage A). Datum has limited storage. Whenever possible, all storage space should be minimized for all databases and all backups. Error Handling There is currently no error handling code in any stored procedure. You plan to log errors in called stored procedures and nested stored procedures. Nested stored procedures are never called directly.

NEW QUESTION: 2 What button would you like to insert a link to the wizard associated with the notification as shown in the attached screenshot?
A. Option 3 **B.** Option 2 **C.** Option 4 **D.** Option 1
Answer: A

NEW QUESTION: 3 A customer has an EMC Avamar system with a Data Domain device on its back-end. The customer has decided to remove the Data Domain device from its current location and install the device in another location. They want to integrate the Data Domain device into their current backup solution with NetWorker using DD Boost. What is a best practice to remove the Data Domain device from the Avamar system?
A. Use Data Domain shredding to remove all data from the device **B.** Remove all backups on the Avamar system and remove all checkpoints **C.** Remove all backups on the Avamar system and allow the checkpoints to roll off **D.** Move all clients to MC_RETIRE and allow all data to roll off the Avamar system
Answer: C
