NEW QUESTION: 2Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2. Server1 runs Windows Server 2012 R2. Server2 runs Windows Server 2008 R2 Service Pack 1 (SP1) and has the DHCP Server server role installed. You need to manage DHCP on Server2 by using the DHCP console on Server1. What should you do first?
A. From Windows Firewall with Advanced Security on Server2, create an inbound rule.
B. From Internet Explorer on Server2, download and install Windows Management Framework 3.0.
C. From Windows PowerShell on Server1, run Install-Windows Feature.
Answer: A
Explanation: When the DHCP role is installed, it appears that the firewall rules are automatically added, so C is not valid (not only that, but either way it is an existing rule that one would need only enable nonetheless, not create a new rule). This means you only need to add the DHCP Manager MMC snap-in which is a Role Administration Tool feature. So the correct answer must be B.
