If you choose our E\_ACTAI\_2403 training guide it will only take you 15-36 hours to prepare before the real test, You can just free download the demo of our E\_ACTAI\_2403 training guide on the web to know the excellent quality.

### **100% Pass Quiz E\_ACTAI\_2403 - SAP Certified Specialist - Project Manager - SAP Activate for Agile Implementation Management -High-quality Reliable Exam Simulator**

Only high-quality goods can meet the needs of every customer better, If you study with our E\_ACTAI\_2403 exam materials, you can become better not only because that you can learn more, but also because you can get the admired E\_ACTAI\_2403 certification.

For instance, E\_ACTAI\_2403 exam software with good sales is developed by our professional technical team with deep analysis of a lot of E\_ACTAI\_2403 exam questions, Besides, our company always insists on that the user experience is the main principal.

We offer three versions for E\_ACTAI\_2403 guide torrent materials: the PDF version is available for exam reviewing and printing out, practicing many times, We can know the pass [MB-335 Exam Assessment](#) rate is really low and getting a wonderful pass mark is difficult for most candidates.

Our E\_ACTAI\_2403 training prep will really protect your safety, Our E\_ACTAI\_2403 study question is compiled and verified by the first-rate experts in the industry domestically and they are linked closely with the real exam.

**NEW QUESTION: 1** DRAG DROP **Answer:** Explanation: Explanation  
Box 1: Empty and delete the DB Subnet.  
Box 2: Empty and reconfigure the Web subnet to be larger  
Box 3: Create the DB subnet to be larger.

**NEW QUESTION: 2** You have a Windows Preinstallation Environment (Windows PE) image. You need to ensure that when a client computer starts from the Windows PE image, the Net time command is run to synchronize the computer's clock to the clock of a deployment server. What are three possible ways to achieve this goal? (Each answer presents a complete solution. Choose three.)  
**A.** Modify Winpeshl.ini.  
**B.** Create a file named Unattend.xml.  
**C.** Create a script and add the script to Winpe-scripting.cab.  
**D.** Create a file named Sysprep.inf.  
**E.** Modify Startnet.cmd.  
**Answer: A, B, E**  
**Explanation:**  
**B:** Add a Customized Script with Winpeshl.ini  
You can launch a customized shell application by using a file called Winpeshl.ini. Winpeshl.exe will process the settings in Winpeshl.ini during boot. If you create a customized Winpeshl.ini and require Plug and Play or network support, you must include a call to Wipeinit.exe. Wpeinit.exe specifically installs Plug and Play devices, processes Unattend.xml settings, and loads network resources.  
**C:** Add a Customized Script with Startnet.cmd  
You can add customized command-line scripts in Windows PE by using Startnet.cmd. By default, Windows PE includes a Startnet.cmd script located at %SYSTEMROOT%\System32 of your customized Windows PE image. Startnet.cmd currently starts Wpeinit.exe. Wpeinit.exe specifically installs Plug and Play devices, processes Unattend.xml settings, and loads network resources.  
**E:** Add Customizations with Unattend.xml  
You can use an answer file with Windows PE to specify various settings and actions. When Windows PE starts, it implicitly looks for a file called Unattend.xml at the root of any bootable device (for example, a USB flash drive or a floppy disk). You can also specify an Unattend.xml file by using Startnet.cmd and Wpeinit.exe.  
**Note:** The following procedure demonstrates how to add a customized script to a Windows PE image offline. Windows PE provides three methods for launching custom scripts: Winpeshl.ini, Startnet.cmd, and Unattend.xml. The Windows PE default interface is a Command Prompt window. However, you can create a customized Winpeshl.ini file to run your own shell application. You can also create your own version of Startnet.cmd to run a specific set of commands, batch files, or scripts. Unattend.xml is a new answer file format for Windows PE 2.0, which replaces Winbom.ini and Winpeoem.sif.  
**Reference:** Include a Custom Script in a Windows PE Image

**NEW QUESTION: 3** In which of the following components is an exploited vulnerability MOST likely to affect multiple running application containers at once?  
**A.** Sandbox escape  
**B.** Common libraries  
**C.** Configuration files  
**D.** ASLR bypass  
**Answer: D**
