**NEW QUESTION: 4** A channel within a computer system or network that is designed for the authorized transfer of information is identified as a(n)? **A.** Overt channel **B.** Covert channel **C.** Opened channel **D.** Closed channel **Answer: A** **Explanation:** An overt channel is a path within a computer system or network that is designed for the authorized transfer of data. The opposite would be a covert channel which is an unauthorized path. A covert channel is a way for an entity to receive information in an unauthorized manner. It is an information flow that is not controlled by a security mechanism. This type of information path was not developed for communication; thus, the system does not properly protect this path, because the developers never envisioned information being passed in this way. Receiving information in this manner clearly violates the system's security policy. All of the other choices are bogus detractors. **Reference(s) used for this question:** KRUTZ, Ronald L. & VINES, Russel D., The CISSP Prep Guide: Mastering the Ten Domains of Computer Security, 2001, John Wiley & Sons, Page 219. and Shon Harris, CISSP All In One (AIO), 6th Edition, page 380 and Harris, Shon (2012-10-25).
